Use the "Print this results summary" and save your attempt as a pdf. You will need the printout showing all questions for your module submission.

Performance Summary

Exam Name:	SIT292 Module 1 Self-Assessment
Session ID:	513032831522922
Exam Start:	Sun Jul 13 2025 10:39:38
Exam Stop:	Sun Jul 13 2025 11:45:54
Time Spent:	0:12:20

Created using Numbas (<https://www.numbas.org.uk>), developed by Newcastle University (<https://www.newcastle.ac.uk>).

Question 1

Consider the following system of linear equations.

$$\begin{aligned}8x_1 &= 40 \\8x_2 &= 40 \\4x_1 - 2x_2 &= 10 \\-5x_1 &= -25\end{aligned}$$

Provide the **augmented matrix** of the system. Use the up and down arrows next to the row/column numbers to increase the size of your matrix.

Rows: Columns:

$$\begin{pmatrix} 8 & 0 & 40 \\ 0 & 8 & 40 \\ 4 & -2 & 10 \\ -5 & 0 & -25 \end{pmatrix} \quad \checkmark$$

Expected answer:

$$\begin{pmatrix} 8 & 0 & 40 \\ 0 & 8 & 40 \\ 4 & -2 & 10 \\ -5 & 0 & -25 \end{pmatrix}$$

Score: 1/1 ✓

✓ Your answer is correct. You were awarded 1 mark.

You scored 1 mark for this part.

Question 2

For the following (non-homogeneous) system represented by its augmented matrix,

$$\left(\begin{array}{ccc|c} 0 & 2 & 10 & \\ -4 & 0 & 4 & \\ -2 & 2 & 12 & \\ 0 & 5 & 25 & \end{array} \right)$$

Which of the following are solutions?

☐

$$\begin{pmatrix} 0 \\ 6 \end{pmatrix}$$

☒

$$\begin{pmatrix} -1 \\ 5 \end{pmatrix}$$

☐

$$\begin{pmatrix} 2 \\ -2 \\ -4 \end{pmatrix}$$

☐

$$\begin{pmatrix} -2 \\ 5 \\ 5 \end{pmatrix}$$

Expected answer:

☐

$$\begin{pmatrix} 0 \\ 6 \end{pmatrix}$$

☒

$$\begin{pmatrix} -1 \\ 5 \end{pmatrix}$$

☐

$$\begin{pmatrix} 2 \\ -2 \\ -4 \end{pmatrix}$$

☐

$$\begin{pmatrix} -2 \\ 5 \\ 5 \end{pmatrix}$$

Score: 1/1 ✓

✓ You chose a correct answer. You were awarded **1** mark.

You scored **1** mark for this part.

Question 3

Consider the following matrix representing the augmented form $[A|\mathbf{b}]$ of a system of 3 linear equations:

$$\begin{pmatrix} 0 & -3 & -18 & 60 \\ 0 & -2 & -9 & 31 \\ 0 & -3 & -15 & 51 \end{pmatrix}$$

Row operations

After applying the first sets of Gaussian algorithm steps, the following matrix is obtained:

$$\begin{pmatrix} 0 & 1 & 6 & -20 \\ 0 & 0 & 3 & -9 \\ 0 & 0 & 3 & -9 \end{pmatrix}$$

Use division/multiplication by a scalar first to create a leading 1 in row 2, and then use the new Row 2 to make the value below its leading 1 a zero.

Enter the resulting matrix, which should be in row echelon form.

$$\left(\begin{array}{|c|c|c|c|} \hline 0 & 1 & 6 & -20 \\ \hline 0 & 0 & 1 & -3 \\ \hline 0 & 0 & 0 & 0 \\ \hline \end{array} \right) \checkmark$$

Expected answer:

$$\left(\begin{array}{|c|c|c|c|} \hline 0 & 1 & 6 & -20 \\ \hline 0 & 0 & 1 & -3 \\ \hline 0 & 0 & 0 & 0 \\ \hline \end{array} \right)$$

Score: 1/1 [► Show feedback](#)

Solve the system

Based on the augmented form you've obtained, solve the system in terms of the free variable, which you can denote by s .

Enter your equations in terms of s

$$x_1 = \boxed{s} \quad s \quad \checkmark$$

Expected answer: s s

$$x_2 = \boxed{-2} \quad -2 \quad \checkmark$$

Expected answer: -2 -2

$$x_3 = \boxed{-3} \quad -3 \quad \checkmark$$

Expected answer: -3 -3

Score: 3/3 [► Show feedback](#)

Question 4

On the left-hand side below we have the original equations (in augmented form $[A \mid \mathbf{b}]$) and then the row echelon form on the right.

$$\left(\begin{array}{cccc} 3 & 6 & -15 & 3 \\ -3 & -6 & 15 & -3 \\ -4 & -8 & 20 & -4 \end{array} \right) \rightarrow \left(\begin{array}{cccc} 1 & 2 & -5 & 1 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{array} \right)$$

The set of solutions, in terms of the parameters s and t , is:

$$x_1 = 1 - 2s + 5t$$

$$x_2 = s$$

$$x_3 = t$$

Express this as the addition of three vectors, a constant vector and two vectors which are multiplied by s and t .

$$\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{pmatrix} \boxed{1} \\ \boxed{0} \\ \boxed{0} \end{pmatrix} \checkmark \quad \text{Expected answer: } \begin{pmatrix} \frac{1}{} \\ \frac{0}{} \\ \frac{0}{} \end{pmatrix} + s$$

$$\begin{pmatrix} \boxed{-2} \\ \boxed{1} \\ \boxed{0} \end{pmatrix} \checkmark \quad \text{Expected answer: } \begin{pmatrix} \frac{-2}{} \\ \frac{1}{} \\ \frac{0}{} \end{pmatrix} + t$$

$$\begin{pmatrix} \boxed{5} \\ \boxed{0} \\ \boxed{1} \end{pmatrix} \checkmark \quad \text{Expected answer: } \begin{pmatrix} \frac{5}{} \\ \frac{0}{} \\ \frac{1}{} \end{pmatrix}$$

Score: 3/3 ✓

constant

✓ Your answer is correct. You were awarded 1 mark.

coeff of s

✓ Your answer is correct. You were awarded 1 mark.

coeff of t

✓ Your answer is correct. You were awarded 1 mark.

You scored 3 marks for this part.

Question 5

Use the Gaussian Algorithm and complete the steps below to solve the following for \mathbf{x} .

$$\begin{pmatrix} -2 & 2 & -5 & 11 \\ 3 & -3 & 4 & -5 \\ 1 & -1 & 1 & -1 \\ 0 & 0 & 2 & -1 \end{pmatrix} \mathbf{x} = \begin{pmatrix} -18 \\ 12 \\ 3 \\ 3 \end{pmatrix}$$

Enter the augmented matrix that results after following steps 1-4 of the Gaussian Algorithm in structions (p11 of 1.2 in the textbook). You should have a leading 1 in the first row and all entries below it equal to 0.

$$\left(\begin{array}{ccccc} \boxed{1} & \boxed{-1} & \boxed{5/2} & \boxed{-11/2} & \boxed{9} \\ \boxed{0} & \boxed{0} & \boxed{-7/2} & \boxed{23/2} & \boxed{-15} \\ \boxed{0} & \boxed{0} & \boxed{-3/2} & \boxed{9/2} & \boxed{-6} \\ \boxed{0} & \boxed{0} & \boxed{2} & \boxed{-1} & \boxed{3} \end{array} \right) \checkmark$$

Expected answer:

$$\left(\begin{array}{ccccc} \hline 1 & -1 & 1 & -1 & 3 \\ 0 & 0 & -3 & 9 & -12 \\ \hline 0 & 0 & 1 & -2 & 3 \\ \hline 0 & 0 & 2 & -1 & 3 \\ \hline \end{array} \right)$$

Continue the steps on the next available column and enter the resulting matrix below (remember there should be a leading 1 in the second row with all entries below it equal to 0).

$$\left(\begin{array}{ccccc} 1 & -1 & 5/2 & -11/2 & 9 \\ 0 & 0 & 1 & -23/7 & 30/7 \\ 0 & 0 & 0 & -3/7 & 3/7 \\ 0 & 0 & 0 & 39/7 & -39/7 \end{array} \right) \checkmark$$

Expected answer:

$$\left(\begin{array}{ccccc} 1 & -1 & 1 & -1 & 3 \\ 0 & 0 & 1 & -2 & 3 \\ 0 & 0 & 0 & 3 & -3 \\ 0 & 0 & 0 & 3 & -3 \end{array} \right)$$

Enter the final row-echelon augmented matrix

$$\left(\begin{array}{ccccc} 1 & -1 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 & 1 \\ 0 & 0 & 0 & 1 & -1 \\ 0 & 0 & 0 & 0 & 0 \end{array} \right) \checkmark$$

Expected answer:

$$\left(\begin{array}{ccccc} 1 & -1 & 1 & -1 & 3 \\ 0 & 0 & 1 & -2 & 3 \\ 0 & 0 & 0 & 1 & -1 \\ 0 & 0 & 0 & 0 & 0 \end{array} \right)$$

Now use this matrix to find a vector \mathbf{x} that solves the system. If you have a free variable, set it to zero (e.g., if x_3 is a free variable, then let $x_3 = 0$, and determine the remaining values based on that).

$$\mathbf{x} = \begin{pmatrix} \boxed{1} \\ \boxed{0} \\ \boxed{1} \\ \boxed{-1} \end{pmatrix}$$

Expected answer: $\begin{pmatrix} 1 \\ 0 \\ 1 \\ -1 \end{pmatrix}$

Score: 4/4 ✓

Gap 0

- ✓ This step appears correct. The matrix is in the correct form and values are correct. You were awarded **1** mark.

Gap 1

- ✓ This step appears correct. The matrix is in the correct form and values are correct. You were awarded **1** mark.

Gap 2

- ✓ This step appears correct. The matrix is in the correct form and values are correct. You were awarded **1** mark.
- ✓ You were awarded **1** mark.

You scored **4** marks for this part.

Question 6

Consider the following solution vectors for a given homogenous system of linear equations,

$$\mathbf{x}_1 = \begin{pmatrix} -4 \\ 6 \\ 3 \end{pmatrix}, \mathbf{x}_2 = \begin{pmatrix} 2 \\ 5 \\ 6 \end{pmatrix}, \mathbf{x}_3 = \begin{pmatrix} -6 \\ 1 \\ -3 \end{pmatrix}$$

If it is possible, express the vector $\mathbf{v} = \begin{pmatrix} 4 \\ 26 \\ 27 \end{pmatrix}$ as a linear combination of \mathbf{x}_1 , \mathbf{x}_2 and \mathbf{x}_3 .

$$\mathbf{v} = \boxed{1} \text{ Expected answer: } \underline{1} \begin{pmatrix} -4 \\ 6 \\ 3 \end{pmatrix} +$$

$$\boxed{4} \text{ Expected answer: } \underline{4} \begin{pmatrix} 2 \\ 5 \\ 6 \end{pmatrix} +$$

$$\boxed{0} \text{ Expected answer: } \underline{0} \begin{pmatrix} -6 \\ 1 \\ -3 \end{pmatrix}$$

If it is not possible, enter 0 for all 3 coefficients.

Score: 2/2 ✓

✓ Correct. Your coefficients will result in a linear combination that produces the vector, \mathbf{v} . You were awarded **2** marks.

You scored **2** marks for this part.
