

I had a couple of slip-ups the first attempt that I was able to resolve here, overall a very satisfying sample of questions that didn't pose too much trouble. I used my calculator for fraction arithmetic so that I could carry angles through the solution before collapsing to decimals at the final step. I also used my calculator for the trigonometric ratios.

Question 4	1/1	
Question 5	1/1	
Question 6	1.5/2	
Total	9.5/10	(95%)

Congratulations! You have achieved the minimum threshold for this module's self-assessment.

Use the "Print this results summary" and save your attempt as a pdf. You will need the printout showing all questions for your module submission.

Performance Summary

Exam Name:	SIT292 Module 3 Self-Assessment
Session ID:	2350677760761549
Exam Start:	Tue Jul 29 2025 16:25:20
Exam Stop:	Tue Jul 29 2025 17:29:29
Time Spent:	1:04:09

Created using Numbas (<https://www.numbas.org.uk>), developed by Newcastle University (<https://www.newcastle.ac.uk>).

Question 1

Starting with the matrix,

$$A = \begin{pmatrix} 2 & 2 & 3 \\ 4 & 3 & 1 \\ 1 & 1 & 2 \end{pmatrix}$$

The results following the first steps of the inversion algorithm are as follows:

Augmented matrix

$$\begin{pmatrix} 2 & 2 & 3 & 1 & 0 & 0 \\ 4 & 3 & 1 & 0 & 1 & 0 \\ 1 & 1 & 2 & 0 & 0 & 1 \end{pmatrix}$$

Step 1.

$$\begin{pmatrix} 1 & 1 & 2 & 0 & 0 & 1 \\ 4 & 3 & 1 & 0 & 1 & 0 \\ 2 & 2 & 3 & 1 & 0 & 0 \end{pmatrix}$$

Step 2.

$$\begin{pmatrix} 1 & 1 & 2 & 0 & 0 & 1 \\ 0 & -1 & -7 & 0 & 1 & -4 \\ 0 & 0 & -1 & 1 & 0 & -2 \end{pmatrix}$$

Write down the resulting augmented matrix after performing the next step (step 3).

Rows: Columns:

$$\begin{pmatrix} 1 & 0 & -5 & 0 & 1 & -3 \\ 0 & 1 & 7 & 0 & -1 & 4 \\ 0 & 0 & -1 & 1 & 0 & -2 \end{pmatrix} \checkmark$$

Expected answer:

$$\begin{pmatrix} 1 & 0 & -5 & 0 & 1 & -3 \\ 0 & 1 & 7 & 0 & -1 & 4 \\ 0 & 0 & -1 & 1 & 0 & -2 \end{pmatrix}$$

(Note that the step by step version of this problem is available in sub-module 3.2. At Step 3, you should not perform any additional operations to obtain a leading 1 in row 3 -- that would be part of Step 4)

Based on this and the Step 4 that would follow, the inverse matrix is:

$$A^{-1} =$$

Rows: Columns:

$$\begin{pmatrix} -5 & 1 & 7 \\ 7 & -1 & -10 \\ -1 & 0 & 2 \end{pmatrix} \quad \checkmark$$

Expected answer:

$$\begin{pmatrix} -5 & 1 & 7 \\ 7 & -1 & -10 \\ -1 & 0 & 2 \end{pmatrix}$$

Score: 4/4 

Gap 0

 Your answer is correct. You were awarded **2** marks.

Gap 1

 Your answer is correct. You were awarded **2** marks.

You scored **4** marks for this part.

Question 2

For the following elementary matrix, indicate the corresponding elementary row operation and write the inverse.

$$\begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & -6 \\ 0 & 0 & 1 \end{pmatrix}$$

Row operation applied

- ☐ I. Interchange two rows
- ☐ II. Multiply one row by a nonzero number
- ☒ III. Add a multiple of one row to a different row

Expected answer:

- ☐ I. Interchange two rows ☐ II. Multiply one row by a nonzero number
- ☒ III. Add a multiple of one row to a different row

Inverse matrix

Rows: Columns:

1	0	0
0	1	6
0	0	1

Expected answer:

1	0	0
0	1	6
0	0	1

Score: 1/1 ✓

Gap 0

✓ You chose a correct answer. You were awarded **0.5** marks.

Gap 1

✓ Your answer is correct. You were awarded **0.5** marks.

You scored **1** mark for this part.

Question 3

For the following elementary matrix, indicate the corresponding elementary row operation and write the inverse.

$$\begin{pmatrix} 1 & 0 & 0 \\ 0 & \frac{1}{7} & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

Row operation applied

- ☐ I. Interchange two rows
- ☒ II. Multiply one row by a nonzero number
- ☐ III. Add a multiple of one row to a different row

Expected answer:

- ☐ I. Interchange two rows
- ☒ II. Multiply one row by a nonzero number
- ☐ III. Add a multiple of one row to a different row

Inverse matrix

Rows: Columns:

1	0	0
0	7	0
0	0	1

Expected answer: $\begin{pmatrix} 1 & 0 & 0 \\ 0 & 7 & 0 \\ 0 & 0 & 1 \end{pmatrix}$

Score: 1/1 ✓

Gap 0

✓ You chose a correct answer. You were awarded **0.5** marks.

Gap 1

✓ Your answer is correct. You were awarded **0.5** marks.

You scored **1** mark for this part.

Question 4

Find a matrix, E , such that $B = EA$ if

$$A = \begin{pmatrix} -5 & 9 \\ -7 & -6 \end{pmatrix}, B = \begin{pmatrix} -26 & -9 \\ -7 & -6 \end{pmatrix}$$

$E =$ Rows: Columns:

$$\begin{pmatrix} \boxed{1} & \boxed{3} \\ \boxed{0} & \boxed{1} \end{pmatrix}$$

Expected answer: $\begin{pmatrix} \frac{1}{0} & \frac{3}{1} \end{pmatrix}$

Score: 1/1 ✓

✓ Your answer is correct. You were awarded 1 mark.

You scored 1 mark for this part.

Question 5

Let $T : \mathbb{R}^3 \rightarrow \mathbb{R}^2$ be a linear transformation.

Find $T \begin{pmatrix} -2 \\ -8 \\ -6 \end{pmatrix}$ if $T \begin{pmatrix} 0 \\ 4 \\ 1 \end{pmatrix} = \begin{pmatrix} 10 \\ -20 \end{pmatrix}$ and $T \begin{pmatrix} -1 \\ 0 \\ -2 \end{pmatrix} = \begin{pmatrix} 3 \\ -14 \end{pmatrix}$.

Enter your result below.

$$T \begin{pmatrix} -2 \\ -8 \\ -6 \end{pmatrix} =$$

Rows: Columns:

$$\begin{pmatrix} \boxed{-14} \\ \boxed{12} \end{pmatrix}$$

Expected answer: $\begin{pmatrix} -14 \\ 12 \end{pmatrix}$

Score: 1/1 ✓

✓ Your answer is correct. You were awarded 1 mark.

You scored 1 mark for this part.

Question 6

Consider the linear transformation $T : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ and the effect of multiplying $T \begin{pmatrix} x \\ y \end{pmatrix}$.

a)

If

$$T = \begin{pmatrix} -\frac{4}{5} & -\frac{3}{5} \\ \frac{-6}{10} & \frac{4}{5} \end{pmatrix}$$

This linear mapping is

- ☐ a rotation about the origin by θ
- ☒ a reflection through the line $y = mx$

Expected answer:

- ☐ a rotation about the origin by θ
- ☒ a reflection through the line $y = mx$

Give the value of θ if it is a rotation or the value of m if it is a reflection

-3 ✓

Expected answer: -3 -3

*Give values of θ in terms of 'pi', e.g., $\pi/2$, $3\pi/5$ etc and express over the domain $(-\pi, \pi]$.

**If your value involves surds, use 'sqrt', e.g. sqrt(2) for the square root of 2.

Score: 1/1 ✓

Gap 0

✓ You chose a correct answer. You were awarded **0.5** marks.

Gap 1

✓ Your answer is numerically correct. You were awarded **0.5** marks.

You scored **1** mark for this part.

b)

Identify a matrix that applies a rotation of $\pi/4$ about the origin followed by a reflection through the line $y = mx$ with $m = 2$

$\begin{pmatrix} \boxed{0.141} & \boxed{0.989} \\ \boxed{0.989} & \boxed{-0.141} \end{pmatrix}$ ✓

Expected answer: $\begin{pmatrix} \frac{0.141}{0.990} & \frac{0.990}{-0.141} \end{pmatrix}$

*Enter the entries of the matrix correct to 3 decimal places.

Score: 0.5/1 ✓

▼ Hide feedback

✓ One or more of the cells in your answer is incorrect, but you have been awarded marks for the rest. You were awarded **0.5** marks.

You scored **0.5** marks for this part.
